Peak e-News

We are pleased to present you with this first ever issue of the Peak Well Services News Letter. In the coming months we will be focusing on bringing to you an overview of our product line. Ranging from low end tooling to high end flow control devices & specialised fishing tools, we aim to inform our clients and potential clients on the Peak Well Services product range. In this first issue we unveil the new Power Jar & take a look at the use of 3D imagery to raise the profile of our specialist tooling.

Peak 3D Releasable Overshot

Peak Power Jar (Inverted Upstroke Spring Jar)

Peak Well Services have completed testing of the Peak Power Jar. A new design to the market which has been developed out of necessity to ensure continuous operation in high debris environments. Formally named the Peak Power Jar (Inverted Upstroke Spring Jar), the Jar incorporates several unique design features. These include:

- *Inverted Latch & Jar Rod Assembly. Designed to reduce debris influx, significantly increasing performance in high debris environments*
- *Opposable Button Locking Mechanism to enable "on toolstring" adjustment & also maintain precise jar setting whilst in hole*
- *Peak Integral Dual Roller System designed to enable a near frictionless jar stroke to increase effective impact force particularly in high angle, deviated wells.*
- *Minimal working parts to*

provide the operator simple & rapid redress with ultimate reduction in cost

- *Dual Spring Stack for greater control of jar settings*
- *Spring Stack permanently relaxed and compressed only during firing operation increasing component working life*

Calibration Sub to suit all connection types

- *Aligned with Peak Accelerator, Peak Linear Jar & Peak Fluted Roller Centraliser Subs for effective conveyance in high angle, deviated wells*

For more information on the Peak Power Jar, contact +61-8-9270 0500 or email info@peakwellservices.com

- *True Universal Hydraulic*

Peak goes 3D

In addition to the launch of our first newsletter PWS has entered into the 3D world with our very first 3D product animation for our Releasable Overshot.

Our 3D imagery is intended to better communicate

Peak 3D Releasable Overshot components

technical information to our customers in a clear & concise manner resulting in a more informed understanding of our products functional features.

Comprehensive assembly animations will be created showing every aspect of product assembly in minute detail highlighting all areas of significant importance. Actual "in well" operational animations will also be created to further enhance the customers understanding.
